

Platinum: published Fei EOS and our refit

Published: $K'_0 = 5.080$, $\gamma_0 = 2.720$, $q = +0.500$ | Refit: $K'_0 = 5.08696$, $\gamma_0 = 2.61240$, $q = -1.66064$

— Fei (2007), Table 1 × Dewaele RT data
 - - - Our joint refit ○ Fei (2004) Au-Pt data

Total pressure RMSE, all 78 observations: published 0.442 GPa → refit 0.347 GPa

ΔP = EOS pressure – calibrated data pressure. Fei data re-reduced with the published Fei (2007) Au scale.
 Volume error bars only. Equal pressure weights; $V_0 = 60.38 \text{ \AA}^3$, $K_0 = 277 \text{ GPa}$, $\theta_0 = 230 \text{ K}$ fixed.
 Dewaele's 298 K observations assigned to 300 K. Both curves use the printed Debye-temperature law.
